Koopman Partners 2024 Quarter 1 Report

April 26th, 2024

The General Market

The S&P 500 produced a return of 10.16% in the first quarter of 2024. This return was largely held up by the hope that The Federal Reserve was going to pivot on interest rate hikes. Inflation has proven to be stickier than they expected with rates hovering above 3% year-on-year. It is my opinion that the Fed stopped increasing rates too early. They also should not have hinted at rate cuts so early. As we know, the market likes to price those cuts in early even though they still have yet to happen.

It is also my opinion that we should not even be considering rate cuts. Interest rates have been artificially low for the better part of 15 years now. Borrowing money should have some friction. I view debt as a horrible drug- it feels good at the moment in being able to purchase the unearned and have it today. But over the long-term it causes great pain in business, government and personal finance.

The corporate world has loaded up on cheap debt over the past 15 years. This lowers our pool of investable companies. It's always our philosophy that we want to buy businesses that we could hold for at least a decade. Heavy debt loads put businesses in jeopardy- of which we want nothing to do with. We aim for debt-to-free cash flow rates of less than 3. In other words, three years or less of free cash flow to pay off the existing debt. We also consider the cash on hand as part of this equation.

The Fed will likely not be cutting rates this year. I believe they will likely increase them again to keep the flames of inflation at bay. I have no crystal ball. However, if The Fed continues to increase rates this year, it's likely we'll see a declining market in the back half of 2024. In addition to uncertainty that troubles markets during a presidential election. I, of course, view this as an opportunity, should it happen.

Oil continues to be one of the biggest drivers of the inflation we are seeing. Oil is used heavily in everything we use everyday. Packaging, transportation, production and agriculture all use energy and oil products. These are a few examples of how a consumer product gets from the field/ground to your home and table.

We saw the same situation in the 1970's. Where inflation was persistent and oil was in short supply. As with any good or service: when oil is in short supply, prices go up. We know that oil

Koopman Partners LP

Koopman Partners 2024 Quarter 1 Report

drives our economy, as I mentioned above. Thus, prices of nearly everything will increase. In other words, this is the same persistent inflation we are seeing.

We continue to keep a close eye on the oil industry as inventories decrease and inflation remains elevated. Therefore, we view owning oil companies as a hedge against inflation.

Also of note: historically, inflation doesn't come in a single wave. There are usually multiple in the case of the 1940's/early 1950's (3 waves) and 1970's/early 1980's (2 waves). It is likely we will see another wave in addition to what we saw in 2022.

2024Q1 Results:

During the first quarter of 2024, the fund produced an unaudited return of +9.90%. Net of fees, the return to limited partners would be +7.80%. During this period, the S&P 500 produced a return of 10.16% and the Russell 2000 produced a return of 4.81%. A mild outperformance of the Russell 2000 but a mild underperformance of the S&P 500. Of course, it is not likely we will beat these indices every quarter or every year. There will always be some variation but over a 3-year stretch of time, our results should be better. Otherwise, there is no reason to exist. The table below shows our results by year compared to the benchmark indices:

Year	Partnership Return	Limited Partner Return	S&P 500 Return	Russell 2000 Return
2023	+24.43%	+19.20%	+10.29%	+8.81%
2024Q1	+9.90%	+7.80%	+10.16%	+4.81%
Cumulative	+36.75%	+28.50%	+21.50%	+14.04%
Compounded	+49.52%	+38.03%	+28.44%	+18.39%

Note: 2023 returns are from June 22nd, 2023 to year end.

To reiterate: the indices are not perfect but provide us with an important benchmark each year. It is my belief that these indices approximate the returns you would likely receive from most other funds, investment companies and registered investment advisors. My long-term goal is to deliver returns in excess of these indices whether or not the fund is plus or minus for the year. If I can't beat those over the long-term, there is no reason for this fund to exist.

Reiteration of our Advantages

There are many advantages in operating a small fund that I want to reiterate with all of you. We have three main advantages:

1. Where our opportunities are (<\$15 billion market capitalization)
2. Our size and nimbleness
3. Our contrarian mindset

The first is that we can fish in different (smaller) ponds. The majority of passive investments are concentrated into the S&P 500. Another large constituent of fund managers in both mutual and hedge funds seek to mimic the performance of the S&P 500. In other words, the mega and large-cap end of the business spectrum is saturated. Saturated to the point where it is difficult to find a deal in those larger companies.

Our advantage continues to be found in the mid-caps and lower (<15 Billion market capitalization). These companies tend to hit the sweet spot in terms of growth and coverage. These businesses are excluded from the popular S&P 500 index. They are also not generally sought by the larger funds. The number of investable companies decreases as a fund's size increases. Thus, we are able to look where relatively few others are looking.

Our size also gives us an advantage in buying and selling. We are more nimble and can buy and sell without influencing the price. That cannot be said of larger funds who must take weeks to sell out or buy into a position so they won't affect the price.

Our mindset, of course, is our largest advantage. When fear strikes, we stare that down with logic, evidence and reasoning in order to find wonderful deals. On the other hand, when greed takes over, we can sit and watch with patience knowing that deals will eventually come back our way. Essentially, if we do what everyone else does, we should expect similar results. To me, those results are average and I refuse to settle for mediocre.

Koopman Partners 2024 Quarter 1 Report

Operations

Operations were minimal in the first quarter of 2024. Largely due to the S&P 500 reaching all-time-highs at the end of the quarter. During all-time-highs, opportunities to invest the way we do are generally limited. This quarter was no exception. We were net sellers, reducing all positions and selling out of one. There were also no option sales in the first quarter of 2024 due to lack of opportunities.

Our holdings are currently minimal at this time. There are four holdings within the fund. We are actually outside of our typical range of 5-10 but that is expected in times of market peaks and fewer opportunities

1. Albertsons Companies Inc (ACI)

There is still a situation I mentioned within the 2023 Annual Report that I view as a great opportunity. The company in question is Albertsons Companies Inc (ACI)- a large national grocery chain. Kroger (KR), another large grocery chain, is purchasing ACI and merging as a new company: Kroger-Albertsons.

Albertsons ran into troubles in the early 2000's and was purchased by a private equity firm. Over that time, operations of the business have improved- especially in the last 5-6 years. ACI went public again in June of 2020 with another Initial Public Offering (IPO). The share price has remained depressed since the IPO and even more so since the merger was announced.

On one side, the FTC and unions are fighting against the deal saying it will create less competition. On the other side, we must not forget about Wal-Mart, who has a stranglehold on the grocery market. Merging the two would create better competition between the two.

As I mentioned earlier this year, I argue there is still great value either way this deal goes. At the current share price, there is now a +36% upside should the merger go through. Otherwise, I believe the upside is likely a double if the deal fails. However, that's certainly not guaranteed. We would also have more time invested should the deal fail.

Koopman Partners LP

Koopman Partners 2024 Quarter 1 Report

Excerpt from our 2023 Annual Report:

“The different opportunity in question is what's called a merger arbitrage. In this case, Company A is purchasing Company B for \$27.25 per share. Usually in these deals, there is a spread between the trading/ticker price and Company A's purchase price. Company B was purchased by the fund at \$22 per share. This would result in about a ~24% return should the merger go through early in 2024- exactly the deals I look for. Of course, the question is what happens if the merger fails. We would continue to own Company B for the long-term- as we should. My goal with any purchase or sale is either: a) heads we win, tails we win or b) heads we win, tails we don't lose much. I calculated the intrinsic value of Company B to be roughly \$38 per share. Either way this deal goes, we stand an opportunity to make money with the latter being the better deal should the merger fail. A classic win-win situation I love to see and get the fund into.”

2. Lovesac (LOVE)

I view Lovesac as another opportunity with great potential at the current trading price. This company is profitable, growing and securing more market share in a heavily fragmented and stagnant industry. Here's a high level overview within our 4 M's plus a catalyst/event framework:

Meaning: Lovesac is an innovator and producer of modular couches designed to last a lifetime. They also include many technology features within the couches. There is nothing on the market that comes close to what Lovesac offers.

Moat: The company has many patents on their designs. There are trade secrets while they work to build their brand identity. Being from the middle class, almost everyone I know has a Lovesac couch on their dream purchase list. On top of this, couches can be shipped by major shippers for much cheaper than other brands. They can also be purchased piece by piece instead of all at once.

Management: Management has opted for small footprint stores leading to lower cost operations and higher margins. Founder Shawn Nelson is still with the company which is a positive. It's always nice to have the founder still involved in the operations. The company maintains no debt and is adding at least a dozen showrooms every year.

Koopman Partners LP

Koopman Partners 2024 Quarter 1 Report

Margin of Safety: In my opinion, anything under \$30 is a screaming buy for this company. I've purchased anywhere from \$38 (old Margin of Safety-before update) all the way down to around \$20 in 2022.

Catalyst/Event: There are two events/catalysts at play here: 1) the decline of retailers after all-time-highs in 2020 and 2021. The market largely over reacted to these businesses and priced them unbelievably low. 2) The furniture industry is heavily fragmented and LOVE continues to pick up market share while the sector remains flat.

3. Sprouts Farmers Market (SFM)

Purchased pre-fund in 2021, SFM is slowly being sold. At the current price (~\$65), we are reaching what I believe to be a high valuation and it's time to sell for a new opportunity. I talked in depth about why SFM was purchased in: [Inflection Year: How I Crushed the Market in 2021](#)

4. Texas Pacific Land (TPL)

I wrote in depth why we purchased TPL in: [Inflection Year: How I Crushed the Market in 2021](#)
As I mentioned above, we are continually monitoring the oil industry and have several more companies on our watchlist we would like to purchase in addition to TPL.

Looking Forward

In March of this year, we switched the fund over from a Regulation D, 506(b) offering to a 506(c) offering. This allows the fund to advertise its services and solicit investors who I do not already know. Since undergoing this change, I have seen a larger influx of interest in addition to the five investors who committed to joining the fund in the near future. In addition, we are also looking to work with a local family office to potentially help their clients. I am also pursuing relationships with local financial advisors and family offices.

This spring, I ran the partnership through The University of Iowa Venture School 7-week program. My goal was to better market the partnership and that goal was largely achieved. Early on in the class, the instructors would ask "what is different about this?" I knew there was a difference but I struggled to come up with a good answer. One of the instructors challenged me to say it in two words. At the time, I thought it was impossible but here it is:

Contrarian. This is the biggest difference: We go against the standard market doctrines. Meaning that if we do what everyone else does, we should expect average results.

Koopman Partners LP

Koopman Partners 2024 Quarter 1 Report

Specialized. We generally focus on four industries of competence: Industrials, Materials, Energy and Consumer Goods.

At times, I also use “Concentrated” as another way to describe the business. What I’m coming down to is pitching it as a portfolio diversifier. As in: diversification of mindset within an asset class. Most agree that diversification of assets is important in our investments. I argue that diversification of mindset has a place in our investments as well.

Now that I know our differentiators and how to market the partnership, I can now commit a better focus on growing the fund.

I am looking forward to growing this fund and your wealth alongside my family and I. As I’ve mentioned before, all of my immediate family's net worth minus the house is in the fund. I eat my own cooking and have a vested interest in first growing your wealth.

If you have any questions about any of the matters above, please reach out. I will be happy to help you answer them.

Sincerely,

Sean Koopman
